

**Pursuing sustainability**  
**2010 WEC Assessment of country energy and climate policies - A sneak preview**

**UKWEC Workshop, 8 September 2010, 11.30 - 13.30**

Venue: **Ernst & Young LLP, 1 More London Place, London, SE1 2AF**

Global population growth and the importance of limiting global warming mean energy policymaking has to accommodate multiple agendas—economic development, national security, social welfare, and environmental protection. As a result, policy approaches to the national primary energy mix, infrastructure development, market operation, and demand management need to be governed by principles relating to long-term energy sustainability.

The World Energy Council's (WEC) definition of energy sustainability has three key dimensions—*energy security, social equity, and environmental impact mitigation*. For these to be pursued successfully, public acceptance and an economic framework that reflects key externalities are critical.

At the same time the pressure on energy policymaking to support multiple agendas has increased in recent years. The definition of energy sustainability has become broader and the trade-offs between policy priorities sharper.

The World Energy Council, in the interest of our sustainable energy future, and in partnership with Oliver Wyman, has developed a methodological framework to identify effective policies around the world and examine how they can be transferred from one country to another.

Meeting starts at **11.30am** (Tea and coffee available from 11.00am)

**SPEAKERS**

**Speaker from Oliver Wyman** - compilers of the WEC report

**Christoph Frei**, Secretary General, World Energy Council

**Joan MacNaughton** CB, Senior Vice President, Power & Environmental Policies, ASTOM Power

Chairman/ Moderator – **Michael J S Gibbons** OBE, Chairman UKWEC

13.30 Buffet Lunch

14.30 Close of the meeting
